Big Time Review

1) Conversions
a) $55 \mathrm{Km}=? \mathrm{~m}$
b) $425 \mathrm{cL}=? \mathrm{~mL}$
c) $25 \mathrm{mg}=? \mathrm{~g}$
d) $25,000 \mathrm{~J}=? \mathrm{~kJ}$
2) How many Significant figures?
a) 10.1
b) 0.00556
c) 0.0001
d) $1.0 \times 10^{-3}$
3) Calculations with Significant Figures
a) $0.0026 \times 10 .=$
b) $236.1+0.00999=$
c) $102.3 \div .0023=$ $\qquad$ d) $0.01256-1.096=$
4) Scientific Notation and Sig Figs
a) $0.02568=$ $\qquad$ b) $0.000589=$ $\qquad$ c) $1.5 \times 10^{-3} \cdot 5.00 \times 10^{+5}=$ $\qquad$
d) $\frac{1.0 \times 10^{-14}}{1.56 \times 10^{-7}}=$ $\qquad$
5) In the lab you measure the room temperature to be $23.5^{\circ} \mathrm{C}$, but the more actual temperature was $23.2^{\circ} \mathrm{C}$. What was your percent error?
6) Give several examples of physical properties.
7) Give several examples of chemical properties.
8) What is the difference between a compound and an element?
9) Explain how a cathode ray tube explained the existence of the electron. Who was credited with the discovery of the electron?
10) Explain how the results of Rutherford's gold foil experiment explained the presence of a dense, positive nucleus.
11) Describe the following:

Atomic number
Mass Number
Average Atomic Mass
12)

|  | Name | At \# | At Mass | p | n | e | charge |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| ${ }^{37}{ }_{17} \mathrm{Cl}^{-1}$ |  |  |  |  |  |  |  |
|  | Bromine-81 |  |  |  |  |  | 0 |
|  |  |  |  | 60 | 86 |  | 0 |
|  |  |  | 19 | 8 |  | 10 |  |
|  |  | 51 |  |  | 70 |  | +5 |

13) What were Dalton's laws and which ones were not entirely correct? Explain how they were incorrect.
14) Why do colors appear when hydrogen gas is exposed to electric current? Use the Bohr model to explain.
15) What are the major differences between the Quantum Mechanical model and the Bohr model of the atom?
16) In quantum mechanics, what is the volume of space that the electron in probably in called?

## Nuclear

17) Explain the differences between make-up and penetrating power for alpha particles, beta particles, and gamma rays.
18) Explain the differences between fission and fusion regarding the fuels and the way reaction occurs.
19) Balance the following nuclear equation:

$$
{ }_{7}^{14} \mathrm{~N}+{ }_{2}^{4} \mathrm{He} \rightarrow{ }_{-1}^{0} \mathrm{e}+?
$$

20) How much energy is in a beam of light with a wavelength of $6.32 \times 10^{-14} \mathrm{~m}$ ?
21) Tungsten has five common isotopes present in the following percentages: tungsten- 180 at $0.100 \%$, tungsten 182 at $26.3 \%$, tungsten 183 at $14.3 \%$, tungsten-184 at $30.7 \%$, and tungsten- 186 at $28.6 \%$. What is the average atomic mass of tungsten?

## Periodic Table

22) What is the periodic Law?
23) On the periodic table, distinguish between:

Periods
Groups
Metals
Non-metals
Semi-Metals
24) On the periodic table identify where to find the:

S-block, D-block, P-Block and F-block<br>Alkali Metals<br>Alkali Earth Metals<br>Transition Metals<br>Halogens<br>Noble Gases

## Periodic Trends

25) Describe the trends and give a reason for each:
a) Atomic radius

- Why does it get smaller across a period, larger down a family/group?
b) Ionic Size
-Why is an anion larger than a cation from the same period?
c) Electronegativity

Why is it related to the number of protons in the nucleus and number on energy shells?

## Chemical Formulae and Bonding

26) What are the difference between a covalent and ionic bonds?
27) Explain how the octet rule can be used to predict the charge of elements in the $S$ and $P$ blocks. Why is this not true of the D block?
28) What is a valence electron?
29) 

Names
$\mathrm{Mg}(\mathrm{OH})_{2}$
$\mathrm{Na}_{3} \mathrm{~N}$
$\mathrm{PCl}_{3}$
$\mathrm{H}_{2} \mathrm{SO}_{4}$
$\left(\mathrm{NH}_{4}\right)_{2} \mathrm{CO}_{3}$
$\mathrm{H}_{2} \mathrm{CO}_{3}$
$\mathrm{Be}\left(\mathrm{ClO}_{3}\right)_{2}$
$\mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2}$

## Formulas

Iron (III) Oxide
Potassium bromide
Uranium (II) nitrate
Arsenic pentaiodide
Cesium chromate
Strontium nitrite
Titanium (V) oxide
Chromium (I) chromate
Aluminum sulfate pentahydrate
30) Draw the lewis dot structures for the following molecules and determine if they are polar Methanol $\left(\mathrm{CH}_{3} \mathrm{OH}\right) \quad$ Nitrogen tribromide $\quad$ Carbon dioxide $\quad$ Dihydrogen monoxide $\quad \mathrm{CH}_{4}$

## Chemical Reactions and Equations

31) Why must a chemical equation be balanced?
32) Balance the following chemical equations.

| $\left(\mathrm{NH}_{4}\right)_{2} \mathrm{CO}_{3}$ | $\rightarrow$ | $\mathrm{NH}_{3}+$ | $\mathrm{H}_{2} \mathrm{O}+$ | $\mathrm{CO}_{2}$ |
| :--- | :--- | :--- | :--- | :--- |
| $\mathrm{KClO}_{3}$ | $\rightarrow$ | $\mathrm{KCl}+$ | $\mathrm{O}_{2}$ |  |

33) Calcium phosphate and silicon dioxide are mixed to produce tetraphosphorus decaoxide and calcium silicate $\left(\mathrm{CaSiO}_{3}\right)$.
34) Phosphorus pentachloride and water react to produce phosphoric and hydrochloric acids
35) Give an example of the following types of reactions:
a) Direct combination
b) Single replacement
c) Double replacement
d) Decomposition
e) Combustion
36) Write the balanced the equation and determine type of reaction:
a) Copper (III) chloride reacts with sulfur to produce a gas and a salt.
b) Calcium carbonate is heated to produce an oxide and a gas.

Hint: the gas puts out fires.
c) Magnesium hydroxide and phosphoric acid neutralize each other.
d) Uranium metal reacts with concentrated sulfuric acid to produce a gas and a uranium (III) salt.
e) Nickel (II) bromide and sodium phosphate yield
37) What is the percent composition of calcium in calcium phosphate?

## Stoichiometry

38) In \#36a, how many liters of gas at STP would be produced from the reaction of 16.5 g of copper(III)chloride with excess sulfur?
39) In \#36a, how many formula units of the salt are created from a reaction with 5.38 g of sulfur reacting with excess copper(III)chloride?
40) In \#36a, how many atoms of sulfur were reacted with excess copper(III)chloride if 83.5 g of the gas was created?

## Energy

41) How much would the temperature of water change if 62.5 kJ of energy was added to a 3.00 kg sample?
42) Calculate the mass of copper placed in $1200 . \mathrm{g}$ of water if the specific heat of copper is $0.387 \mathrm{~J} / \mathrm{g}^{\circ} \mathrm{C}$, the initial temperature of the water was $75.4^{\circ} \mathrm{C}$, the final temperature of the water was $95.2^{\circ} \mathrm{C}$, and the initial temperature of the copper was $285^{\circ} \mathrm{C}$.
43) How much heat will be released when 1.48 g of chlorine reacts with excess phosphorus according to the following equation? $2 \mathrm{P}+5 \mathrm{Cl}_{2} \rightarrow 2 \mathrm{PCl}_{5}+886 \mathrm{~kJ}$
44) When a 19.2 g sample of KCN dissolves in 65.0 g of water in a calorimeter, the temperature drops from $28.1^{\circ} \mathrm{C}$ to $15.4^{\circ} \mathrm{C}$. Calculate the $\Delta \mathrm{H}$ for this process.

$$
\mathrm{KCN}_{(\mathrm{s})} \rightarrow \mathrm{K}_{(\mathrm{aq})}^{+}+\mathrm{CN}_{(\mathrm{aq})}^{-} \quad \Delta \mathrm{H}=?
$$

## Gases

45) Why do gases become a liquid under high pressures and low temperatures?
46) Explain how the total pressure of a mixture of gases in a container can be determined if the amount of each gas is known.
47) Explain why the volume of each gas in the container is the same as the size of the container regardless of how much of each gas is present.
48) If equal parts of 3 gases totaling 4.38 moles of gas were added to a 6.03 L container at 305 K , then what is the partial pressure of each gas?
49) In question $\# 43$, if 43 L of chlorine gas was consumed in the reaction at 1.04 atm of pressure and 289 K , then how many grams of $\mathrm{PCl}_{5}$ would you expect to produce? How much energy in Joules?

## Solutions

50) Can you make 100 mL 's of a 0.25 M solution from 10 mL of a 5.0 M solution, if so explain how!
51) Explain how you can make 250 mL 's of a 0.68 M NaOH solution from solid NaOH .
52) What is the only thing that you can do to a solution to change the amount of solute that can be dissolved if you cannot change the amount of solvent?

53) How much $\mathrm{NaClO}_{3}$ can be dissolved in 100 g of water at $65^{\circ} \mathrm{C}$ ?
54) How much KBr can be dissolved in 45 g water at $80^{\circ} \mathrm{C}$ ?
55) How much $\mathrm{KNO}_{3}$ will precipitate if 80 g was dissolved in 100 g of water and the temperature of the water was lowered to $20^{\circ} \mathrm{C}$ ?

## Acids and Bases

56) What is the pH of a solution if the concentration of NaOH is $2.3 \times 10^{-5} \mathrm{M}$ ?
57) Define an acid and a base using the Arrhenius and the Bronsted-Lowry definitions.
58) Explain how adding base to acid produces a neutral solution.
59) What is the $\left[\mathrm{H}^{+}\right]$in a solution that has a pH of 3.8 ? What would the pOH be? $\left[\mathrm{OH}^{-}\right]$?

## Equilibrium

60) In the following reaction, explain two things that can be done to shift the equilibrium to produce more products:

$$
\mathrm{C}_{2} \mathrm{H}_{4}+3 \mathrm{O}_{2} \rightarrow 2 \mathrm{CO}_{2}+2 \mathrm{H}_{2} \mathrm{O}+\text { Heat }
$$

61) Write the $\mathrm{k}_{\mathrm{eq}}$ expression for the previous reaction and explain how the $\mathrm{k}_{\mathrm{eq}}$ value can tell you whether you will find more products or more reactants when the equilibrium is reached

## Misc. Calculations

Use the following equation for 62-65

$$
\mathbf{M g}(\mathbf{s})+2 \mathbf{H C l}_{(\mathrm{aq})} \rightarrow \mathbf{M g C l} \mathbf{2}_{(\mathrm{aq})}+\mathbf{H}_{\mathbf{2}(\mathrm{g})}
$$

62) If the hydrogen gas was collected in a 0.25 L container under 125 Kpa of pressure at $28^{\circ} \mathrm{C}$, then how many grams of Magnesium were reacted?
63) If 58 mL of a 0.15 M HCl solution was used to react excess magnesium, then how many formula units of Magnesium Chloride were produced?
64) If the pH of the starting solution was 3.8 and 50 mL was used, then how many hydrogen atoms were produced?
65) What is the percent yield if only 43.2 mL of hydrogen gas was collected at 752.5 mmHg and $22.3^{\circ} \mathrm{C}$, and 0.52 g of magnesium was reacted with excess hydrochloric acid?
66) What was the pH of the original HCl solution if 25 mL of acid was titrated with 0.2 M NaOH and the phenolphthalein changed color after 45 mL of base was added.
67) If the half-life of a radioisotope is 5.62 days. How many grams of a 58 gram sample will be left after 33.72 days.
68) If 85 mL 's of a gas at STP is compressed into a 0.02 L container at $25^{\circ} \mathrm{C}$, then what was the final pressure in Kpa?
